Portfolio

AssetBook

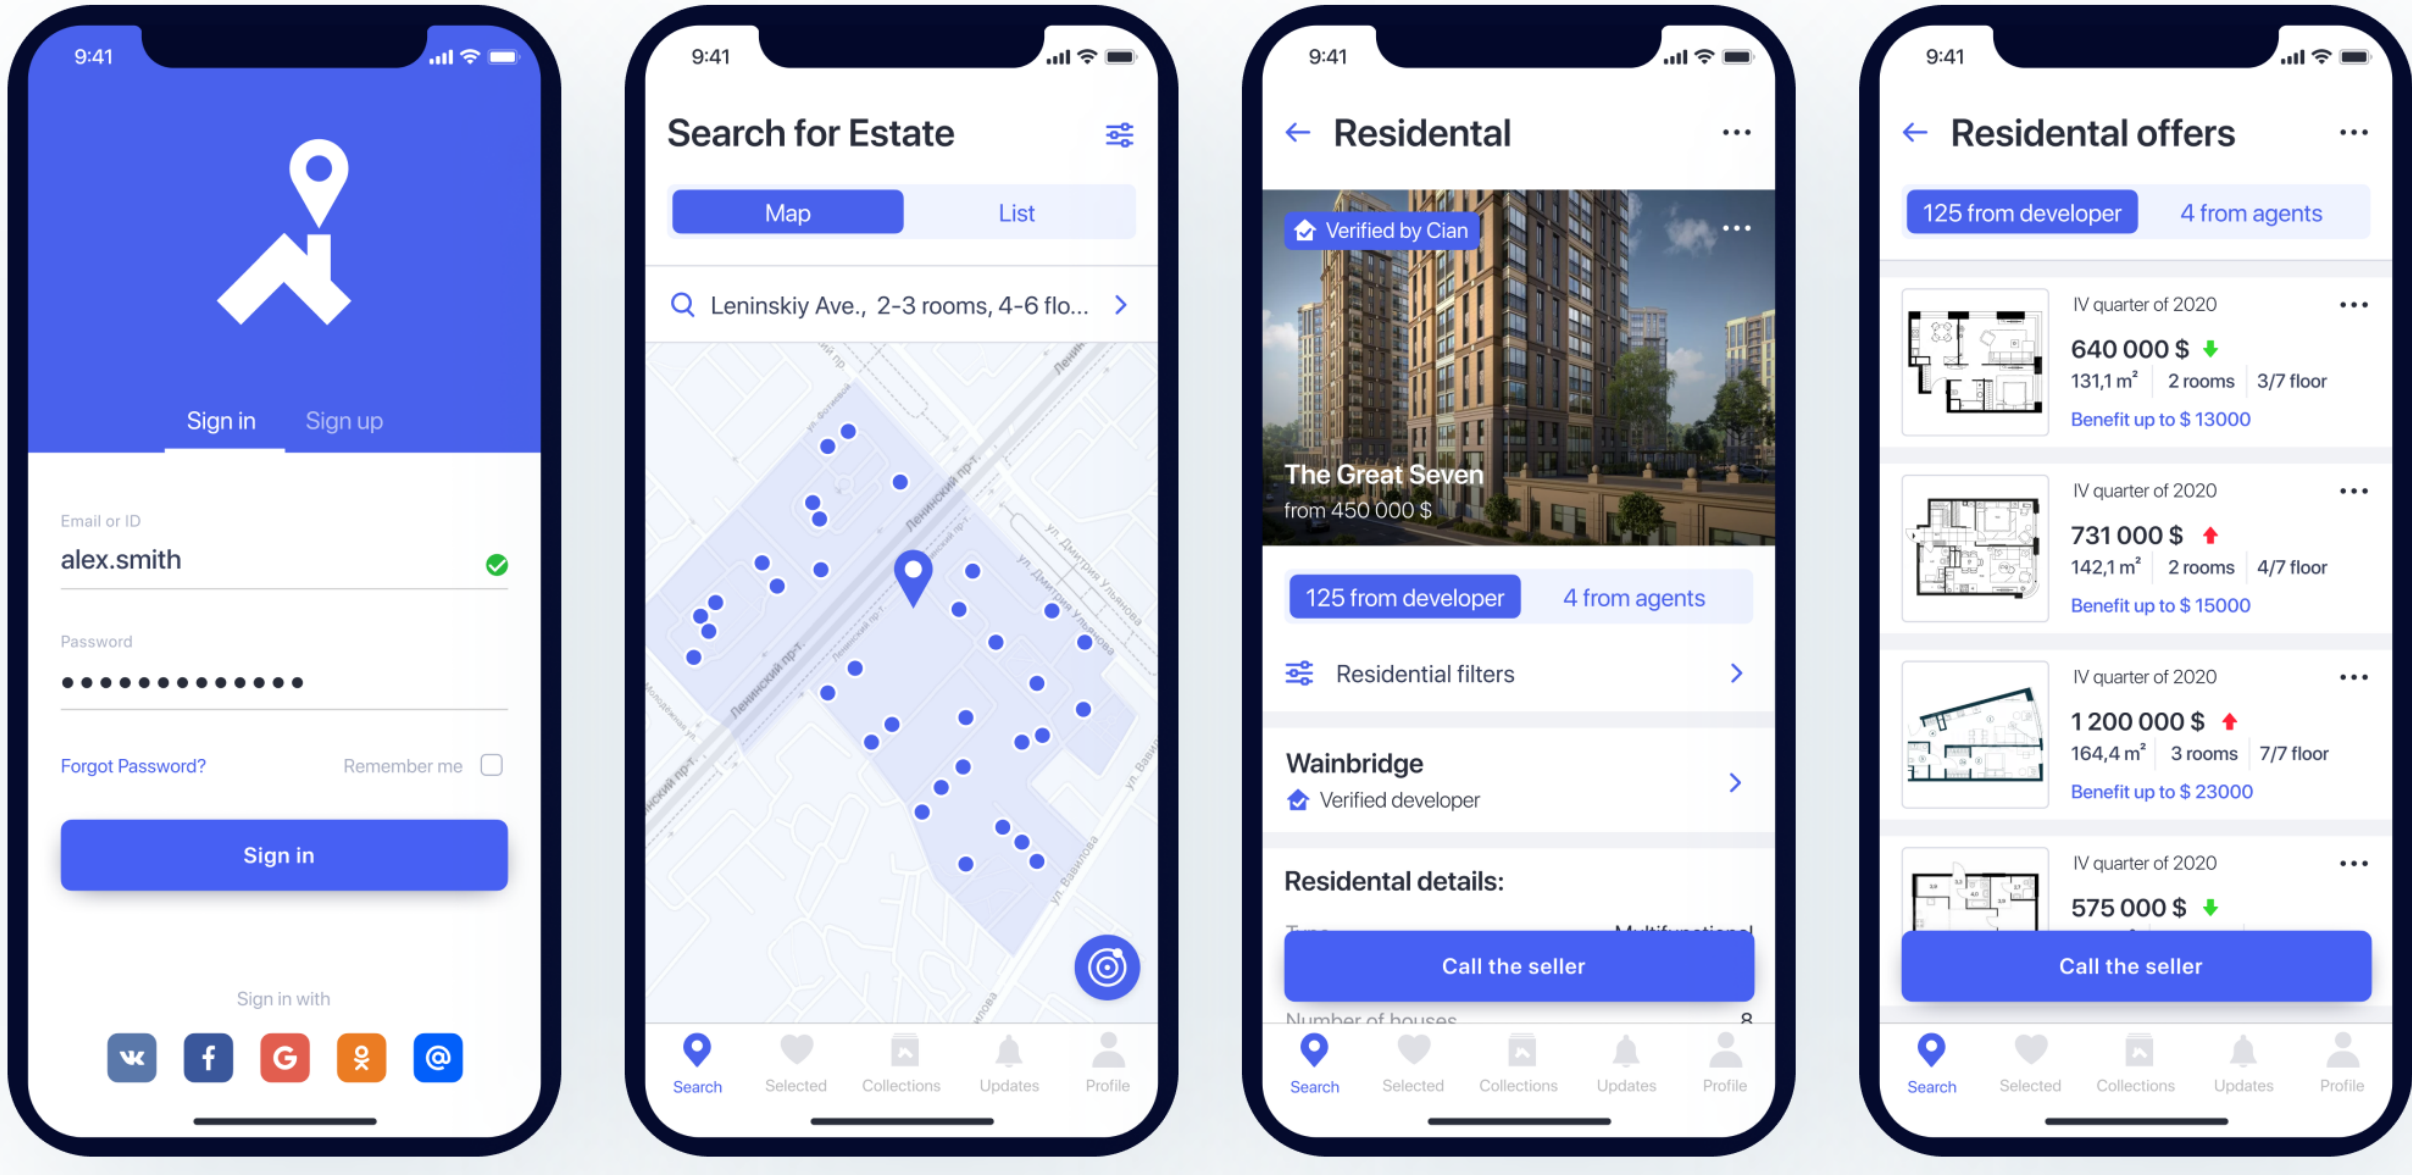

The web application is designed for financial advisers. It is created as a platform for storing data on the financial assets of different clients. The application is equipped with tools that allow the user to make a broad picture of the state of client's assets, as well as to make detailed reports. Currently, the customer works on a new improved version of this platform, with new features and functionality. As part of this project, our team worked on the front-end part of the application.

Cian

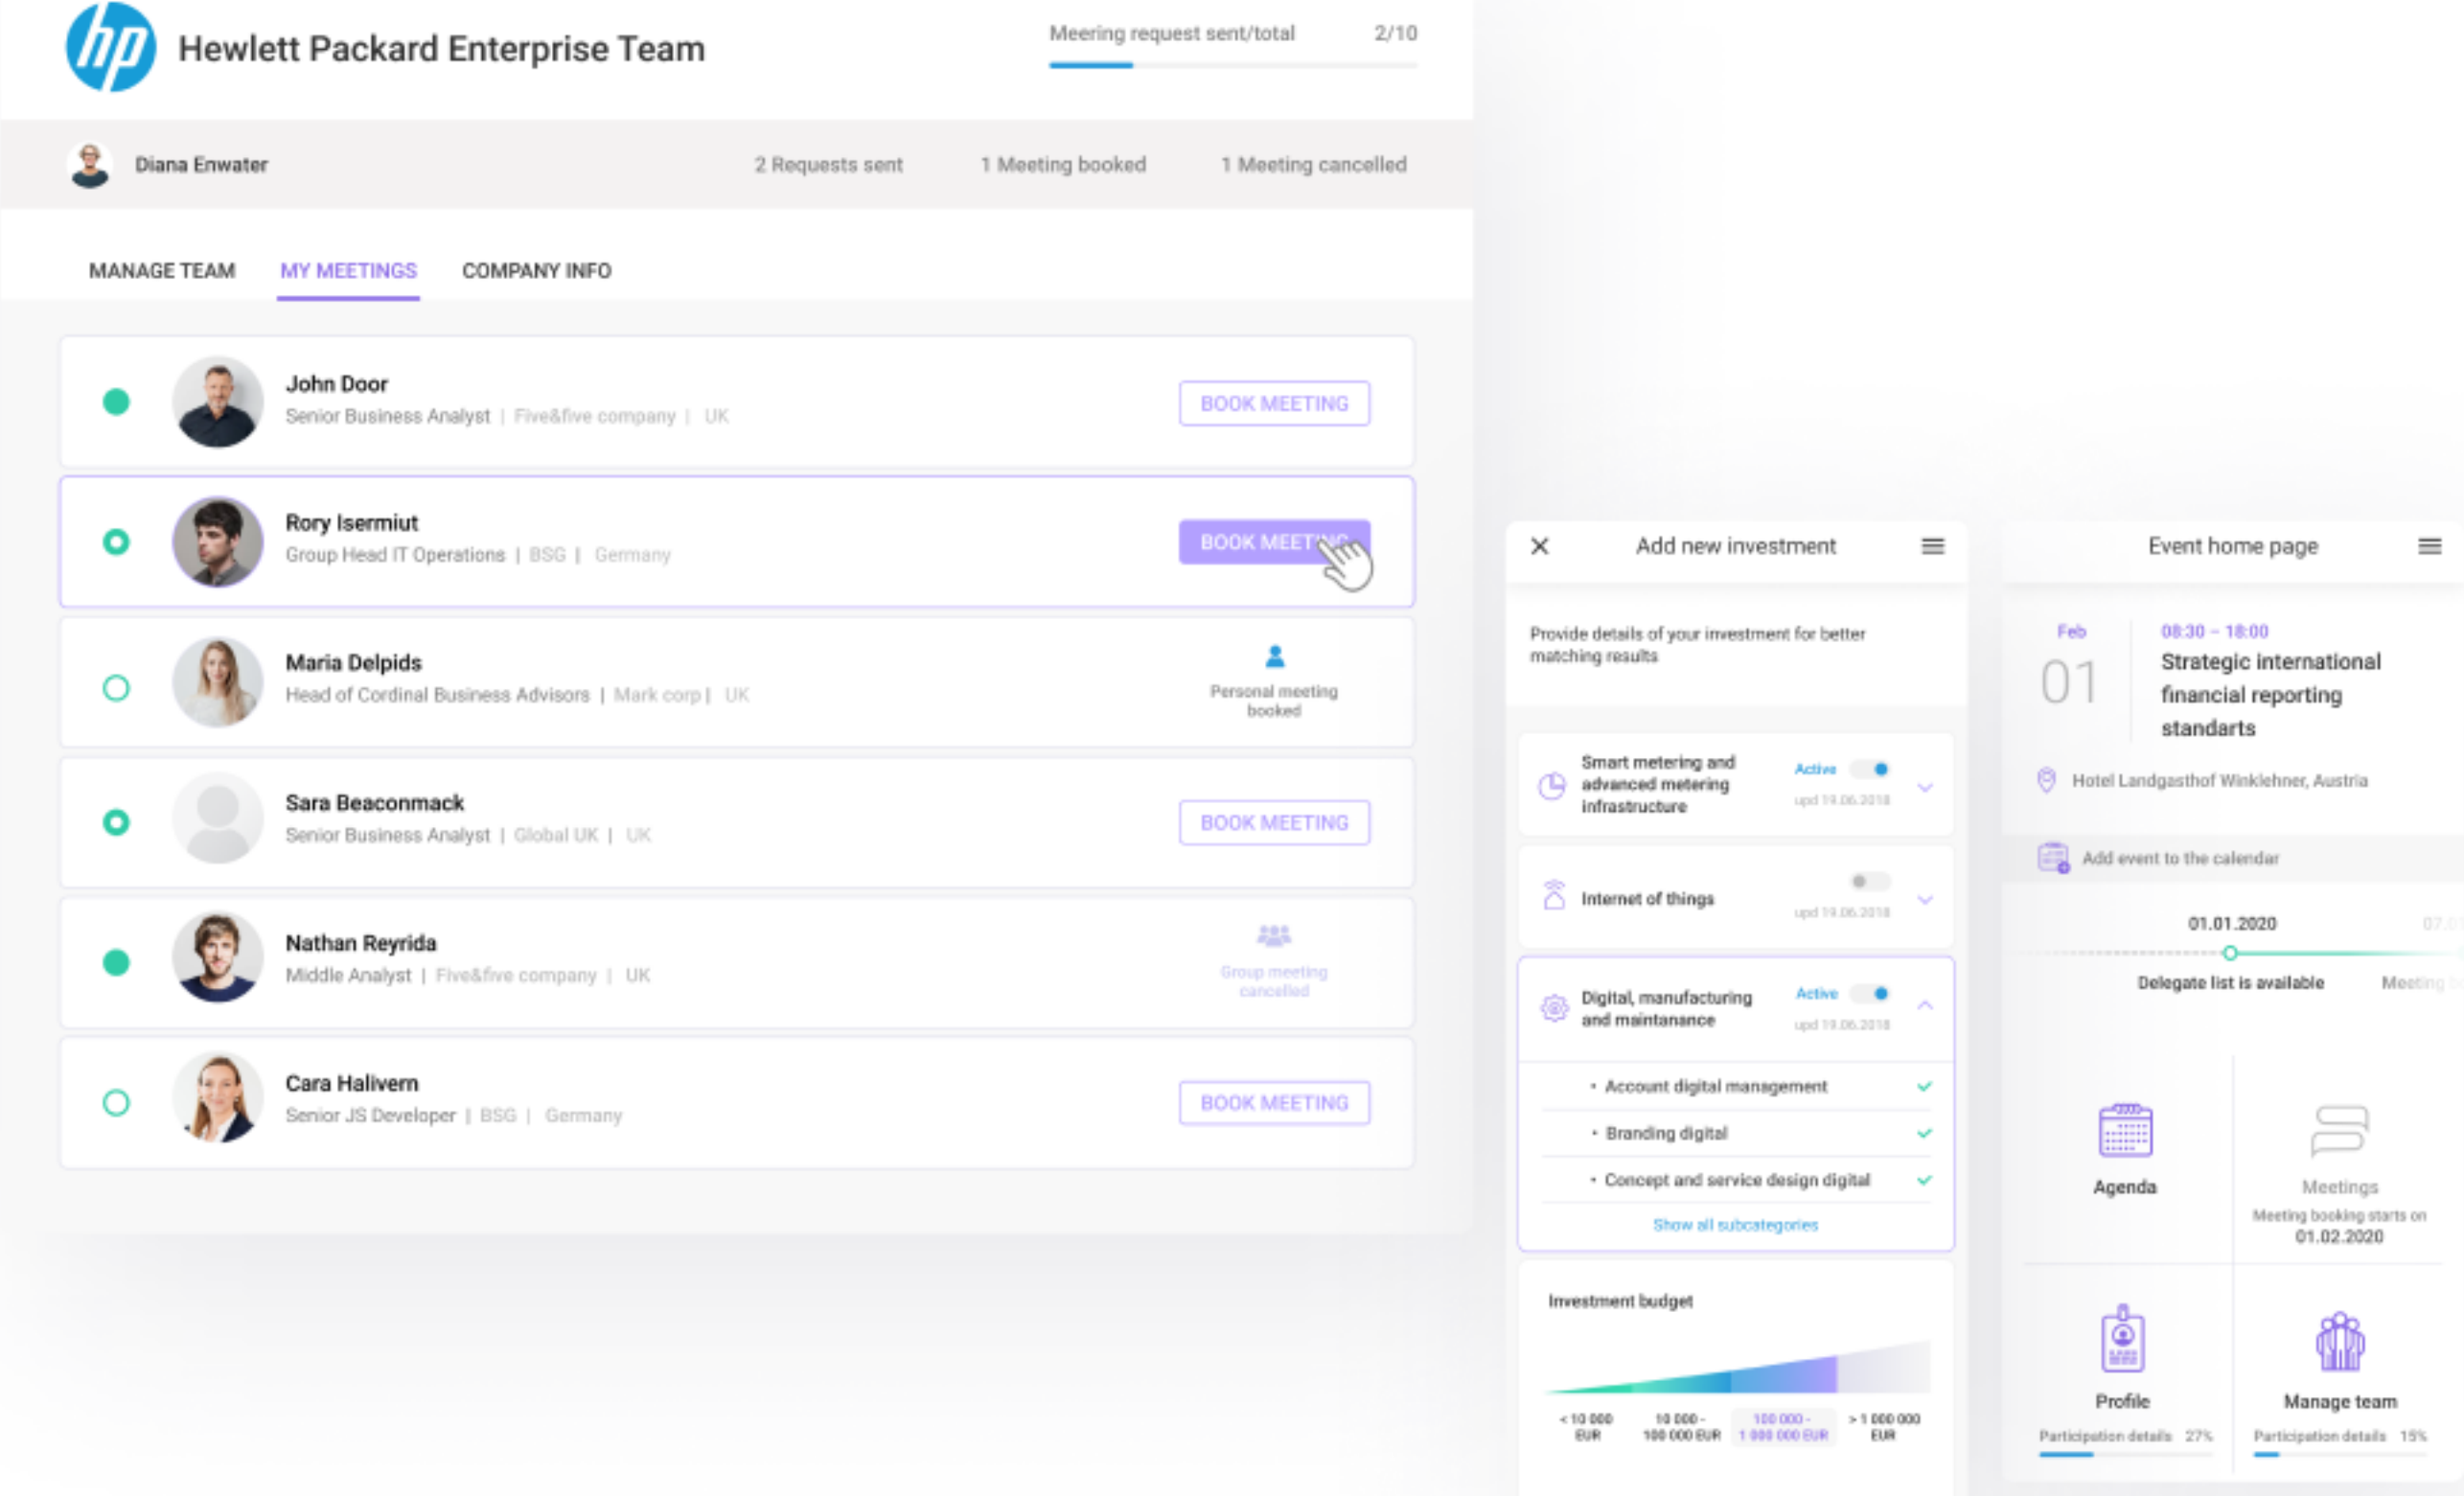

The customer is one of the largest Internet services for buyers and tenants of housing, with the largest database of residential, urban, and suburban real estate objects in Russia. The company sees its mission in helping people find housing of their dreams without any difficulties.

There was a lack of resources in the customer's software team, that's why Andersen was asked to provide several developers to work on the service. The main task of our specialists was to build a mobile app.

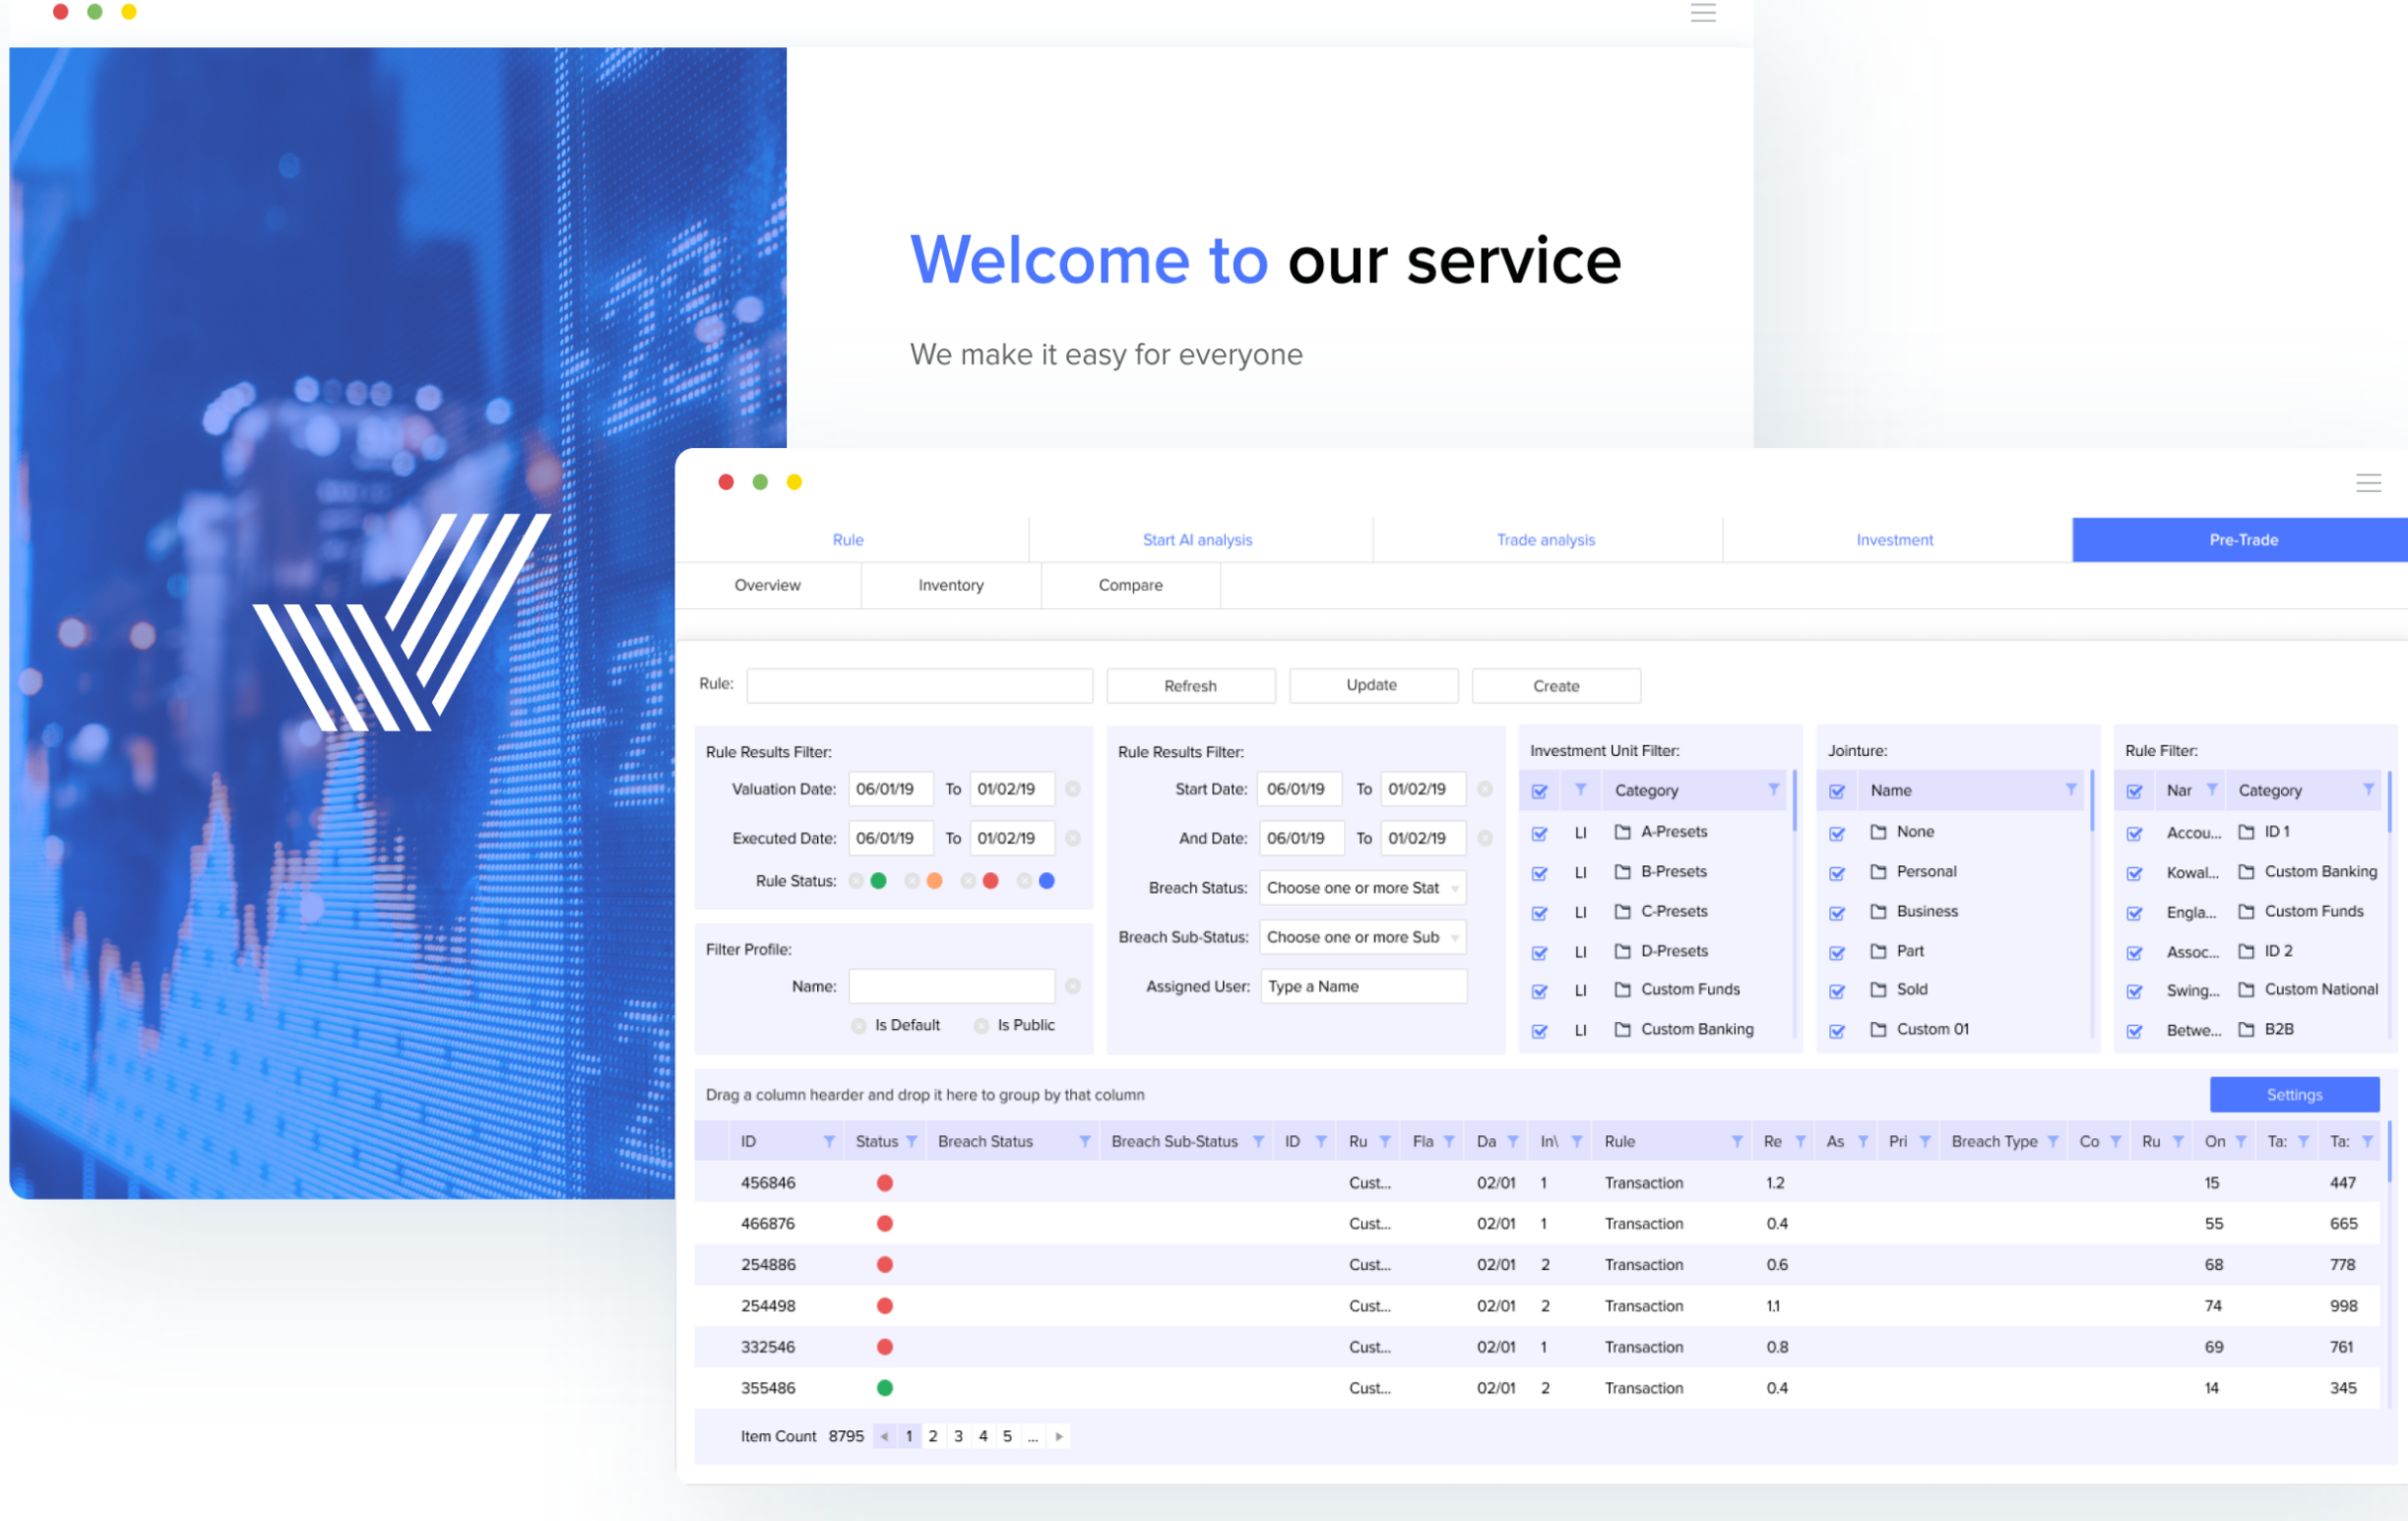

Management Events

Our customer is a company engaged in managing business events. The company's activity caters for thorough organization and optimization of every single and hence requires software that would automate the business processes, as well as store and edit all the necessary information. Also, there was a need for a software solution to manage the customer's extensive client base. The development of this solution was entrusted to the Andersen team.

BNP Paribas

Our customer's initiative was to launch new market research and analytical tool that would help retail businesses to optimize the performance of sales and marketing activities. It was the first time for the customer to assign the application development to an outsourcing company. We faced the task to build a geomarketing solution using location intelligence to meet business requirements.

IVI

Development and improvement of the company's home theater platform for demonstrating various video content. This project is divided into several large subprojects. Our team participates in the following ones: improvement and optimization of the website, development of the application for viewing customer's content on SmartTV, and development and integration of the application for viewing the customer's content on TV-tuner based on the Android system (Xiaomi Mi Box, etc.).
